

LabelControl

Reduce your 5-8% test tube re-collection rates

Our mobile test tube labelling and specimen tracking solution is designed to reduce test tube labelling errors and the recollection and rejection rates because of missing label information or a mismatch between patient and test tube. The solution consists of a mobile application running on a ruggedized mobile handheld device which connects to a mobile or stationary printer via Bluetooth.

Ruggedized Mobile Device

- 4" colour touch screen
- Android 4.4
- 75 x 153 x 29 mm
- 3200 mAh backup battery
- 1D/2D Barcode, RFID

Space

- Small footprint of printer and handheld device
- Attachable to IV trolleys or carry on belt/wrist
- Docking station

Integration

- Directly integrates with HealthRFID SpecimenControl
- Integrates with hospital information system (HIS)
- Integrates with laboratory information system (LIS)

Connectivity

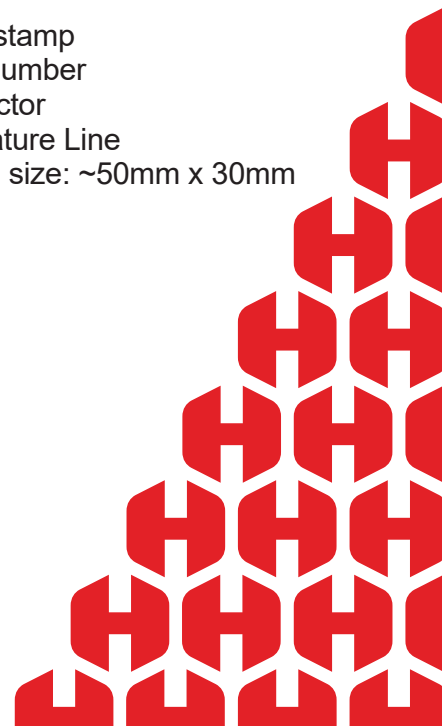

- Wireless 3G or 4G
- WiFi

Key features

- Retrieve patient information by scanning a 1D or 2D barcode on the wristband.
- Print sharp test tube labels, request form labels and episode labels incl. barcodes.
- Track specimens from collection to drop off point to arrival at the laboratory.
- Collect additional information like bedside number and enforce the completion of the process at the bedside.
- Positively identify patients against a blood collection request.
- Use security badges to log-on to the mobile application.
- Receive alerts and notifications for missing or misplaced samples.
- Improve label quality while reducing the labelling time.
- Fully configurable collection process and fully configurable alerts and notifications.

LabelControl Label Info

- Customisable and freely designable
- Patient First Name
- Patient Last Name
- Date of Birth
- Sex
- Timestamp
- UR Number
- Collector
- Signature Line
- Label size: ~50mm x 30mm
