

Minimise the loss of non-replaceable specimens

The current systems used in tracking specimen samples and blood bags often relies on manual work or a barcode system requiring line of sight for each individual item to be read.

The HealthRFID solution drastically reduces the loss and misplacements of high value, non-replaceable specimens. With the introduction of RFID readers at key points from the collection centre through to the laboratory, samples can be accurately and instantly tracked.

FEATURES:

- Integration with LIS – NEW!
- Real-time tracking
- Episode number encoding
- Time stamping
- Proof of delivery
- Specimen volume analysis

Visibility of supply chain from collection to laboratory

Accurate reporting

Real-time data of specimen's location

Loss of specimens are minimised

Reduced time wasted in manual search

Improved customer relations and exceed NATA requirements

HealthRFID has successfully implemented the specimen track and trace solution for other pathology providers and has proven the capabilities of its technology and the end-to-end solution.
